Shoot, Produce and Display 8K – The Refreshed 8K Association Website Shows the Creator Community How to Win the 8K Transition

The 8K Association (8KA), the cross-industry group dedicated to promoting the growth of the 8K ecosystem, has refreshed its content-creator focused web site at www.8kassociation.com. The web site is newly organized to provide information on the Association’s activities, news about the 8K ecosystem as well as detailed resources on the production and delivery of 8K media.

Is Fixed Wireless Access Critical for 8K Adoption?

Fixed Wireless Access or FWA refers to using cellular networks to offer broadband service to residential or enterprise customers. With the advent of mobile 5G networks, the potential to use mmWave bands to offer Gbps service is now a real possibility. Video on demand, including 8K, is expected to drive bandwidth needs for many years to come which is why both telecoms and even cable network providers are actively pursuing this opportunity.

Canon created a dual fisheye lens for its new VR video system

The attachment allows the 8K resolution of the Canon EOS R5 camera to be used to capture stereoscopic images at a higher resolution than most single-camera alternatives and with better fidelity than two-camera options. An app allows the generation of an 8K equirectangular file format that can be directly viewed in most VR headsets. Find out more [here](#).

LG QNED MiniLED 99 Series 8K TV review

The reviewer summarized the pros and cons as:
FOR: Eye-popping 8K video quality; Excellent brightness, color reproduction; Good sound quality, with lots of additional options available
AGAINST: Requires significant viewing space for full 8K effect; Inconsistent upscaling; Sluggish controls; Limited 8K content. Read the Tom's Guide review [here](#).

Sony announces 'Perfect for PlayStation 5' features for 4K & 8K TVs

As noted on this site: "Perfect for PlayStation 5' TVs will bring in two brand-new PS5 exclusive features – Auto HDR Tone Mapping and Auto Genre Picture Mode. They also support frame rates up to 120fps in a super-crisp 4K resolution as specified in HDMI 2.1 in compatible games," announced Sony. Judging by the descriptions, these appear to be HGiG mode (HDR Gaming Interest Group) and ALLM (Auto Low Latency Mode), respectively, perhaps with some special Sony tweaks. Read the FlatpanelsHD coverage [here](#).
